[Comment on this article](#)

**Abstract:** Newer and newer parallel architectures being developed raise a strong demand for high-level and programmer-friendly parallel tools. We show some results regarding mining of association rules, a well-known Data Mining algorithm, which we ported from sequential to parallel within the PQE2000/SkIE environment. The main goals achieved are the low effort spent in parallelizing the code, the machine independence of the application produced, source code portability and performance portability. Here we ... ([Update](#))

Context of citations to this paper: [More](#)

...are also significantly different, because we focus on a common framework for parallelization of a number of algorithms. Becuzzi et al. [4] have used a structured parallel programming environment PQE2000 SKIE for developing parallel implementation of data mining algorithms....

...can be parallelized through our approach. Most of the work has been on distributed memory machines, including association mining [4, 7, 22, 23], k Means clustering technique [6, 17, 38] and bayesian networks [20] Our work is significantly different, because we offer an...

# 1 [Communities I: Free software developers as an occupational community: resolving conflicts and fostering collaboration](#)

Margaret S. Elliott, Walt Scacchi

 November 2003 **Proceedings of the 2003 international ACM SIGGROUP conference on Supporting group work**

 Full text available: [pdf\(299.64 KB\)](#)

 Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

In this paper, we present results from the study of a free software development virtual organization, the GNU Enterprise (GNUe) project, and how they develop software in a globally distributed free software development project. In particular, examples of how they mitigate and resolve conflict are presented. Conflict arises over the use of a non-free tool to create GNUe graphic, and over the use of a non-free tool for GNUe documentation. The GNUe developers resolve the conflict using internet rel ...

4 Putting non-functional requirements into software architecture

Xavier Franch, Pere Botella

April 1998 **Proceedings of the 9th International Workshop on Software Specification and Design**

Full text available:

Additional Information: [full citation](#), [abstract](#), [Publisher Site](#)

This paper presents an approach for incorporating non-functional information of software systems into software architectures. To do so, components present two distinguished slots: their non-functional specification, where non-functional requirements on components are placed, and their non-functional behaviour with respect to these requirements. Also, connector protocols may describe which non-functional aspects are relevant to component connections. We propose a notation to describe non-function ...

**Keywords:** non-functional requirements, software architecture

5 Mobility: A micro-economic approach to conflict resolution in mobile computing

Licia Capra, Wolfgang Emmerich, Cecilia Mascolo

November 2002 **Proceedings of the 10th ACM SIGSOFT symposium on Foundations of software engineering**

Full text available:  pdf(172.44 KB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Mobile devices, such as mobile phones and personal digital assistants, have gained widespread popularity. These devices will increasingly be networked, thus enabling the construction of distributed mobile applications. These have to adapt to changes in context, such as variations in network bandwidth, exhaustion of battery power or reachability of services on other devices. We show how the construction of adaptive and context-aware mobile applications can be supported using a reflective middlew ...

7 A field study of the software design process for large systems

Bill Curtis, Herb Krasner, Neil Iscoe

November 1988 **Communications of the ACM**, Volume 31 Issue 11

Full text available:  [pdf\(2.50 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

The problems of designing large software systems were studied through interviewing personnel from 17 large projects. A layered behavioral model is used to analyze how three of these problems—the thin spread of application domain knowledge, fluctuating and conflicting requirements, and communication bottlenecks and breakdowns—affected software productivity and quality through their impact on cognitive, social, and organizational processes.

8 Combining local negotiation and global planning in cooperative software development projects

Kazuo Okamura

December 1993 **Proceedings of the conference on Organizational computing systems**

Full text available:  [pdf\(1.24 MB\)](#)

Additional Information: [full citation](#), [references](#), [index terms](#)

**Keywords:** change management, conflict resolution, negotiation, planning, software project management, version and configuration management

9 Technical papers: requirements engineering: Detection of conflicting functional requirements in a use case-driven approach: a static analysis technique based on graph transformation

Jan Hendrik Hausmann, Reiko Heckel, Gabi Taentzer

May 2002 **Proceedings of the 24th International Conference on Software Engineering**

Full text available:  [pdf\(1.55 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

In object-oriented software development, requirements of different stakeholders are often manifested in use case models which complement the static domain model by dynamic and functional requirements. In the course of development, these requirements are analyzed and integrated to produce a consistent overall requirements specification. Iterations of the model may be triggered by conflicts between requirements of different parties. However, due to the diversity, incompleteness, and informal nature ...

10 Feature specification and automated conflict detection

Amy P. Felty, Kedar S. Namjoshi

January 2003 **ACM Transactions on Software Engineering and Methodology (TOSEM)**, Volume 12 Issue 1

Full text available:  [pdf\(223.26 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Large software systems, especially in the telecommunications field, are often specified as a collection of features. We present a formal specification language for describing features, and a method of automatically detecting conflicts ("undesirable interactions") amongst

features at the *specification* stage. Conflict detection at this early stage can help prevent costly and time consuming problem fixes during implementation. Features are specified using temporal logic; two features conflict ...

**Keywords:** Feature interaction, linear temporal logic, telecommunications software and systems

11 Collaboration, Conflict and Control: The 4th Workshop on Open Source Software Engineering

Joseph Feller, Brian Fitzgerald, Scott Hissam, Karim Lakhani

May 2004 **Proceedings of the 26th International Conference on Software Engineering - Volume 00**

Full text available:  [pdf\(48.96 KB\)](#) Additional Information: [full citation](#), [abstract](#)

Building on the success of the first three workshops in the series, which were held at ICSE 2001 (Toronto), ICSE2002 (Orlando) and ICSE 2003 (Portland), the 4th Workshop on Open Source Software Engineering, ("Collaboration, Conflict and Control") brings together researchers and practitioners for the purpose of discussing the platforms and tools, techniques and processes, and the organizational structures that are used to support and sustain communication, collaboration and conflict resolution within and ...

12 Avoiding conflict misses dynamically in large direct-mapped caches

Brian N. Bershad, Dennis Lee, Theodore H. Romer, J. Bradley Chen

November 1994 **Proceedings of the sixth international conference on Architectural support for programming languages and operating systems**, Volume 29, 28 Issue 11, 5

This paper describes a method for improving the performance of a large direct-mapped cache by reducing the number of conflict misses. Our solution consists of two components: an inexpensive hardware device called a Cache Miss Lookaside (CML) buffer that detects conflicts by recording and summarizing a history of cache misses, and a software policy within the operating system's virtual memory system that removes conflicts by dynamically remapping pages whenever large numbers of conflict miss ...

13 License tracing in free, open, and proprietary software

Pete Nordquist, Anna Petersen, Angelina Todorova

December 2003 **Journal of Computing Sciences in Colleges**, Volume 19 Issue 2

Full text available:  [pdf\(634.90 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The freedom to view a program's source code is preserved by licensing this program with a free source license. Free and open software licenses often contain clauses that cause them to be incompatible with other software licenses. Thus, if a program is created from sources licensed under a variety of software licenses, it is important to identify the entire set of licenses applicable to this program, so that this set of licenses may be examined for conflicts. This paper describes a software tool ...

**15 Software pipelining**

Vicki H. Allan, Reese B. Jones, Randall M. Lee, Stephen J. Allan

September 1995 **ACM Computing Surveys (CSUR)**, Volume 27 Issue 3Full text available:  pdf(4.72 MB)Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Utilizing parallelism at the instruction level is an important way to improve performance. Because the time spent in loop execution dominates total execution time, a large body of optimizations focuses on decreasing the time to execute each iteration. Software pipelining is a technique that reforms the loop so that a faster execution rate is realized. Iterations are executed in overlapped fashion to increase parallelism. Let  $\{ABC\}^n$

# 1 [Communities I: Free software developers as an occupational community: resolving conflicts and fostering collaboration](#)

Margaret S. Elliott, Walt Scacchi

 November 2003 **Proceedings of the 2003 international ACM SIGGROUP conference on Supporting group work**

 Full text available: [pdf\(299.64 KB\)](#)

 Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

In this paper, we present results from the study of a free software development virtual organization, the GNU Enterprise (GNUe) project, and how they develop software in a globally distributed free software development project. In particular, examples of how they mitigate and resolve conflict are presented. Conflict arises over the use of a non-free tool to create GNUe graphic, and over the use of a non-free tool for GNUe documentation. The GNUe developers resolve the conflict using internet rel ...

4 Putting non-functional requirements into software architecture

Xavier Franch, Pere Botella

April 1998 **Proceedings of the 9th International Workshop on Software Specification and Design**

Full text available:

Additional Information: [full citation](#), [abstract](#)

[Publisher Site](#)

This paper presents an approach for incorporating non-functional information of software systems into software architectures. To do so, components present two distinguished slots: their non-functional specification, where non-functional requirements on components are placed, and their non-functional behaviour with respect to these requirements. Also, connector protocols may describe which non-functional aspects are relevant to component connections. We propose a notation to describe non-function ...

**Keywords:** non-functional requirements, software architecture

5 Mobility: A micro-economic approach to conflict resolution in mobile computing

Licia Capra, Wolfgang Emmerich, Cecilia Mascolo

November 2002 **Proceedings of the 10th ACM SIGSOFT symposium on Foundations of software engineering**

Full text available:  pdf(172.44 KB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Mobile devices, such as mobile phones and personal digital assistants, have gained wide-spread popularity. These devices will increasingly be networked, thus enabling the construction of distributed mobile applications. These have to adapt to changes in context, such as variations in network bandwidth, exhaustion of battery power or reachability of services on other devices. We show how the construction of adaptive and context-aware mobile applications can be supported using a reflective middlew ...

7 A field study of the software design process for large systems

Bill Curtis, Herb Krasner, Neil Iscoe

November 1988 **Communications of the ACM**, Volume 31 Issue 11

Full text available:  [pdf\(2.50 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

The problems of designing large software systems were studied through interviewing personnel from 17 large projects. A layered behavioral model is used to analyze how three of these problems—the thin spread of application domain knowledge, fluctuating and conflicting requirements, and communication bottlenecks and breakdowns—affected software productivity and quality through their impact on cognitive, social, and organizational processes.

8 Combining local negotiation and global planning in cooperative software development projects

Kazuo Okamura

December 1993 **Proceedings of the conference on Organizational computing systems**

Full text available:  [pdf\(1.24 MB\)](#)

9 Technical papers: requirements engineering: Detection of conflicting functional requirements in a use case-driven approach: a static analysis technique based on graph transformation

Jan Hendrik Hausmann, Reiko Heckel, Gabi Taentzer

May 2002 **Proceedings of the 24th International Conference on Software Engineering**

Full text available:  [pdf\(1.55 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

In object-oriented software development, requirements of different stakeholders are often manifested in use case models which complement the static domain model by dynamic and functional requirements. In the course of development, these requirements are analyzed and integrated to produce a consistent overall requirements specification. Iterations of the model may be triggered by conflicts between requirements of different parties. However, due to the diversity, incompleteness, and informal nature ...

10 Feature specification and automated conflict detection

Amy P. Felty, Kedar S. Namjoshi

January 2003 **ACM Transactions on Software Engineering and Methodology (TOSEM)**, Volume 12 Issue 1

Full text available:  [pdf\(223.26 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Large software systems, especially in the telecommunications field, are often specified as a collection of features. We present a formal specification language for describing features, and a method of automatically detecting conflicts ("undesirable interactions") amongst

features at the *specification* stage. Conflict detection at this early stage can help prevent costly and time consuming problem fixes during implementation. Features are specified using temporal logic; two features conflict ...

**Keywords:** Feature interaction, linear temporal logic, telecommunications software and systems

11 Collaboration, Conflict and Control: The 4th Workshop on Open Source Software Engineering

Joseph Feller, Brian Fitzgerald, Scott Hissam, Karim Lakhani

May 2004 **Proceedings of the 26th International Conference on Software Engineering - Volume 00**

Full text available:  pdf (48.96 KB) Additional Information: [full citation](#), [abstract](#)

Building on the success of the first three workshops in the series, which were held at ICSE 2001 (Toronto), ICSE2002 (Orlando) and ICSE 2003 (Portland), the 4th Workshop on Open Source Software Engineering, ("Collaboration, Conflict and Control") brings together researchers and practitioners for the purpose of discussing the platforms and tools, techniques and processes, and the organizational structures that are used to support and sustain communication, collaboration and conflict resolution within and ...

12 Avoiding conflict misses dynamically in large direct-mapped caches

Brian N. Bershad, Dennis Lee, Theodore H. Romer, J. Bradley Chen

November 1994 **Proceedings of the sixth international conference on Architectural support for programming languages and operating systems**, Volume 29, 28 Issue 11, 5

Full text available:  pdf (1.37 MB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)
